Growth and characterization optical studies of N-acetyl-L-alanine - A potential optoelectronic NLO material

K.Premalatha¹, P.Krishnamoorthy^{1*}, T.K.Aravamudan²

^{1,2}Department of Chemistry, Dr.Ambedkar Government Arts College, Chennai-600039, Tamil Nadu, India.

Abstract

The single crystal of N-Acetyl-L-alanine (NALA) has been synthesized by slow evaporation growth technique at ambient temperature using aqueous medium. The unit cell parameters of NALA crystal were identified using single crystal XRD analysis. The various functional groups in the crystal can be identified by FTIR analysis. The Ultraviolet-visible analysis used to prove the cutoff wavelength 231 nm of the crystal, Urbach energy calculated value of 0.11 eV and various optical constant values supports the NLO nature of NALA crystal. Wemple-Di Domenico model used to determine the various single oscillator parameters. Surface analysis and the various elements present in this NALA crystal is proved by SEM with EDAX analysis. The SHG studies proves the 1.4 times greater efficiency of NALA crystal than the KDP. Mechanical studies proved by vicker microhardness studies. RISE pattern has been validated by making used of the theoretical models proposed by Meyer and Hays - Kendall. Thermal stability of the crystal is proved by TG and DTA analysis. Glass transition (Tg) temperature proved by DSC analysis. Thermodynamic parameters elucidated by using the Redfern method. N-methylation is the derivatives reside to methyl amide of N-acetyl L-alanine having the limitation in the freedom related to confirmation of the peptide chain. The shape owe to the potential surface is utmost sensitive towards the position of N-methyl group and its orientation related to the basic chain. Nitrogen substituted amino acid confirms the importance of hydrogen bonding. The molecular structure of NALA is shown in Fig.

Keywords: N-Acetyl L-alanine, SHG, UV analysis, Wemple-DI Domenico model, Redfern method.
